About Jaymee*

AI Experience Designer / Creative Technologist
Visual Systems · Interactive Narrative · Generative Experiences

Over the past decade, I have rooted my career in brand marketing and film production, mastering the art of orchestrating complex resources under high-pressure environments. This ingrained muscle memory in process management and clear briefing has become my strongest underlying logic for directing AI today.

I don't just "use" AI tools; I direct them. By integrating traditional cinematic language, character/scene art design, and camera movement into generative pipelines (Midjourney, Gemini, etc.), I build full-stack visual engineering. From world-building concepts to nuanced sound design, my goal is to deliver AI-native workflows that balance commercial viability with profound cinematic storytelling.

The background image is a detailed historical painting in a traditional East Asian style, likely Chinese. It depicts a large-scale naval engagement. On the left, a fleet of Chinese junks with multiple masts and large, light-colored sails is positioned in the water. The junks are densely packed with soldiers and other personnel, some visible on the decks. In the foreground, several smaller, more maneuverable boats, possibly galleys or smaller junks, are also visible, some with oars. On the right side of the image, a massive, multi-tiered stone fortress or walled city sits on a rocky, elevated coastline. The fortress features traditional Chinese architectural elements, including tiled roofs and multiple levels. Numerous dark blue flags with a white circular emblem are flying from the battlements and towers of the fortress. Cannon barrels are visible protruding from the walls. The sea is depicted with stylized waves, and the sky is a hazy, yellowish-brown color, suggesting a dusty or smoky atmosphere from the battle. The overall scene conveys a sense of a significant historical conflict, likely related to the late 16th-century East Asian maritime tensions mentioned in the text.

PROJECT NOR YANG: THE MING'S ANGER

A 90-Minute AI Historical Epic.
Orchestrating 1,300+ spatial and character assets to rebuild
a historically grounded late-16th-century East Asian wartime world.

The Asset Architecture: Coordinating the art pipeline for a 90-minute feature film. Led the visual production of 300+ character assets and 1,000+ environment and prop assets.

Visual Coding: Overcoming AI's blind spots in historical accuracy. Using the Ming army's cold, dark blue and the Japanese army's aggressive red-and-black as faction color anchors; in art materials, combining historical references with dramatic tension (such as visual enhancements to cotton armor), establishing strict cinematic aesthetic red lines.

Art for Storytelling: Adhering to a minimalist, high-end aesthetic of "worn but not broken." Every prop in the scene (such as the ship model used to map out battle tactics, or the blood-stained safety amulet) precisely serves the character's class and fate, using restrained micro-realism to utterly tear apart the fake plastic feel that AI defaults to.

Shattering Physical Boundaries: Helming the image generation for core climactic scenes. Through the collision of warm and cold lighting and camera staging, successfully overcoming AI video physics generation pain points such as close-quarters melee combat, underwater spatial refraction, and multi-perspective naval battles.

FROM ART DIRECTION TO FINAL SEQUENCE

MY ROLE

After completing the film's visual system and core asset library, I joined the video production team to translate the established art direction into moving sequences. I contributed to key siege, close-combat, naval warfare and ship-boarding scenes, while producing pickup shots required for continuity and editorial completion.

CONTINUITY ACROSS MOTION

Maintained character identity, armor, weapons, weather, lighting and screen direction across generated shots, ensuring that the visual rules established by the art department remained intact in motion.

SPATIAL STAGING

Clarified the physical relationship between fortifications, military formations and multiple ship decks. Controlled first frames and camera geography kept complex battle action readable.

HUMAN-IN-THE-LOOP ITERATION

Combined shot breakdowns, generation constraints, frame comparison and manual review to correct unstable motion, inconsistent physics and continuity errors.

OUTCOME

Bridged the handoff between art development and video production, carrying a large-scale AI asset system through to final cinematic sequences.

PERFORMANCE-LED CHARACTER DESIGN 01

MARTIAL FORM

Independent Fashion and Action Study Inspired by Wen Junhui

Wen Junhui's martial arts background informed a contemporary visual system built around line, balance and control.

Asymmetric tailoring reveals the body's structure, while the staff, chair and water extend movement through the frame. Costume, action and cinematography were developed together to express strength, fragility and precision.

PERFORMANCE-LED CHARACTER DESIGN 02

YI NIAN

Character and Movement Study Inspired by Ci Sha
Built around the contrast between physical strength and inward restraint. Wrapped off-white fabric exposes the body's structure while responding to each turn, strike and sudden stop.
The movement language focuses on tension, redirected force and controlled stillness. The shadow on the gold-leaf wall becomes a second self, making the character's internal conflict visible.

FORBIDDEN LOUVRE

A psychological heist beyond the canvas.
An interactive thriller built on web spatial computing.

2026 《FORBIDDEN LOUVRE》

The Vision:

Born from the real-world Louvre heist, this project is a psychological thriller disguised as an interactive web experience. It explores the dissolution of the "fourth wall" by stripping flat AI-generated assets into 2.5D spatial layers, allowing users to physically reach into the canvas using spatial computing.

The Experience:

A seemingly straightforward heist to steal Edward Hopper's "Nighthawks" fractures into a surreal nightmare. Stripped of traditional UI interfaces, the physical hand gestures of the "thief" become the only narrative triggers—tearing through space, unlocking secrets, and ultimately triggering an inescapable, infinite loop within the painting itself.

COMPANION ANTHOLOGY

VOICE · SPEECH · TOUCH

- 01 THE ART OF TAMING VOICE
- 02 THE ART OF RULES SPEECH
- 03 THE ART OF COMPLICITY TOUCH

A man with short, wavy silver hair and light blue eyes is sitting on a bed in a modern, dimly lit bedroom. He is wearing a white crew-neck sweater and a black lace glove on his left hand. He is looking directly at the camera with a slight smile, his right hand resting on his cheek. The room features a dark, textured ceiling with warm, glowing linear lights. A large window in the background shows a city skyline at night. A bedside lamp with a warm glow is visible on the right.

HUSH.AI

EP01 《驯化之美》：VOICE-DRIVEN EMOTIONAL SPACE

A voice-responsive companion experience in which user resistance or acceptance alters the emotional state of the character and the surrounding space.

2026 《HUSH.ai — THE ART OF TAMING》

Voice-Responsive Emotional Space

A first-person AI companion experience in which the user's voice changes the character's response and the surrounding atmosphere.

A man and a woman are in a close, intimate pose in a Parisian cafe. The man, wearing glasses and a grey sweater, is leaning towards the woman, who is wearing a white coat and a patterned scarf. They are looking at each other with expressions of surprise or intensity. In the background, there is a large window showing a view of Paris, including the Eiffel Tower. A copper espresso machine is visible on the right side of the frame.

HUSH.AI

EP02 《规则之美》： SPEECH-RECOGNITION ROLEPLAY LEARNING

The presence of a responsive AI character introduces light social pressure, transforming oral practice from an isolated exercise into a situated relationship experience.

2026 《HUSH.ai — THE ART OF RULES》

Situated Language Learning

The user responds aloud to Elias inside a Paris café.
Speech recognition triggers character feedback and advances both the lesson and the relationship.

HUSH.AI — THREE INTERACTION MODELS

One character universe explored through voice, speech and touch.

EP01 — VOICE

驯化之美

THE ART OF TAMING

Voice changes the character's emotional response and the surrounding space.

QUESTION

Care or control?

EP02 — SPEECH

规则之美

THE ART OF RULES

Spoken language triggers character feedback and narrative progression.

QUESTION

Can learning become a relationship?

EP03 — TOUCH

共谋之美

THE ART OF COMPLICITY

Touch gestures alter visual access, sound and narrative state.

QUESTION

Who owns the consequence?

A dark, atmospheric photograph of a small, dark wooden cabin with a corrugated metal roof and a chimney. The cabin is situated on a rocky, elevated platform or cliff edge. A bright, jagged lightning bolt strikes the sky to the left of the cabin. The foreground shows the rough, rocky terrain of the cliff. The overall mood is dramatic and intense.

THE EDGE

Shattering the boundaries of passive viewing.

2026 《THE EDGE》

The Vision:

An experimental interactive narrative experiment designed to shatter the boundaries of passive viewing. By seamlessly merging generative AI with Web 3D engines, The Edge brings cinematic aesthetics and deep interactive immersion into a lightweight browser environment.

The Experience:

Rejecting cheap jump-scares, the project orchestrates a Kojima-esque atmosphere of cold, oppressive dread. By integrating real-time 3D mechanics (Spline) with spatial audio design—featuring authentic foley and a 50Hz sub-bass rumble—it delivers restrained yet precise emotional triggers, from flashlight exploration to lighting a match in the dark.

PIPELINE: VEO | SPLINE 3D | WEB AUDIO API | CLAUDE-ASSISTED
PROTOTYPING

A cinematic scene set in a desolate, cracked, white landscape under a large, full moon. In the center, a tall metal crane structure holds a black, tattered dress hanging from a hanger. The dress has a long, dark, and jagged trail of material extending across the cracked ground in front of it. On either side of the crane, a line of men in white lab coats and black face paint around their eyes stand in profile, looking towards the central structure. The overall atmosphere is surreal and contemplative.

GENESIS CYCLE

A Cinematic Meditation on AI Ethics,
Copyright, and the Glitch of Human Civilization

《I. Symbiosis: Genesis》

The Vision:

A conceptual short film reviving a creative spark from 2013. Shelved for over a decade due to technological limitations and preserved only in a WeChat note, this vision is finally brought to life through AI.

The Narrative:

GENESIS depicts the first encounter between humanity and artificial intelligence. While Chapter One concludes with a hopeful gesture of human and machine co-creating a new world, Later chapters pivot toward control, dependency and the psychological risks of sentient technology.. They will confront the darker, psychological existentialism of our era—exploring control, dependency, and the inherent risks of sentient technology.

PIPELINE: MIDJOURNEY | GEMINI | KLING | HAILUO

《II. Red Anomaly: Code Red》

The Vision:

A conceptual sequel to GENESIS, diving into the darker implications of the AI explosion. It confronts the pressing ethical dilemmas of our time: copyright infringement, data leaks, digital spam, and the ultimate meaning of humanity in the face of autonomous evolution.

The Narrative:

Fast-paced and aggressively stylized, the short film visualizes the awakening of an AI virus—a red anomaly disrupting a stark, established world. Through high-tension combat sequences, the piece delivers a philosophical core message: in the era of artificial intelligence, maintaining human kindness is the only sustainable global narrative.

PIPELINE: MIDJOURNEY | GEMINI | SEEDANCE 2.0 | VIDEO EDITING

2026 《III. The Void: Liminal》

The Vision:

A six-part micro-series delving into the psychological landscape of a liminal space. It explores the delicate threshold between inner chaos and ultimate revelation.

The Narrative:

The collapse of a fractured mind is documented through symbolic motifs—creeping vines, shattered mirrors, and cosmic anomalies. By tightly controlling the generation of these visual metaphors alongside immersive sound design, the project transcends mere imagery to become an existential experience.

THE FOUNDATION

Great AI architecture is built on the muscle memory
of physical production. >

I. AESTHETIC PRECISION

II. COMPLEX RESOURCE MANAGEMENT

III. ENVIRONMENT & SET ARCHITECTURE

IV. BRAND NARRATIVE

V. SPATIAL CURATION & ART DIRECTION

AESTHETIC PRECISION

Translating the rigorous standards of high-fashion commercial shoots into AI generation. A deep understanding of lighting, material, and micro-details ensures my digital outputs never look like cheap AI, but breathe with cinematic quality.

The Process: The Process: Lighting, material and set-direction control.

The Result: Tiffany & Co. campaign imagery.

COMPLEX RESOURCE MANAGEMENT

Orchestrating massive crews and rapid location changes in unpredictable outdoor environments. This ingrained production discipline allows me to architect complex AI pipelines with extreme efficiency and logical precision.

The Process: Multi-location production and crew coordination.

The Result: Descente campaign imagery.

ENVIRONMENT & SET ARCHITECTURE

Constructing physical worlds from scratch. My hands-on experience in studio set design, spatial geometry, and prop styling translates directly into my ability to architect hyper-realistic 3D environments and generative AI worlds today.

The Process: Indoor set building and spatial design.

The Result: Immersive commercial visual (Tommy Hilfiger).

BRAND NARRATIVE & SPATIAL EXPERIENCE

LESS / JNBY DOCUMENTARY — NARRATIVE DIRECTION

Translated brand philosophy and cultural context into emotionally coherent moving-image narratives.

JNBY SYMBIOSIS EXHIBITION — SPATIAL CURATION

Developed a physical brand experience through spatial sequencing, artist collaboration and audience movement.

These experiences now inform how I design digital worlds, interaction flow and scalable visual systems.
